

ABSTRACT OF THE DISCLOSURE

In carrying out data communication by use of
a communication network where accounting is made
according to a data amount, the start and end of
5 transmission/reception of a set of objective data to be
transmitted/received are recognized, and the amount of
packets transmitted/received from the start to the end
of transmission/reception of the set of objective data
to be transmitted/received is measured, and thereby
10 a communication charge is calculated, and it is judged
whether or not the calculated communication charge has
reached a warning money amount specified by a user, and
when it is judged that the calculated communication
charge has reached the warning money amount, a warning
15 to that effect is given to the user.
